

EXPLANATION OF CSS CHOICES

- **Colours:** Used calm blue (#3182ce / #2c5282) for button and heading → looks professional and trustworthy. Light gray background (#f4f7fa) makes it easy on eyes.
- **Fonts:** Arial/Helvetica (sans-serif) → clean, modern, readable on all devices. Font-size 16px+ → easy to read. Bold labels → clear what to fill.
- **Alignment:** Everything centred in container → looks balanced. Labels above inputs (block display) → mobile-friendly.
- **Spacing:** Padding (inside) 12px on inputs/button → comfortable clicking. Margin 20px between groups → breathing room. Container padding 40px → not cramped.
- **Borders & Corners:** 1px light border on inputs + 6px rounded corners → soft, friendly look. Focus glow (blue shadow) → shows which field you're typing in.
- **Button:** Full-width, bigger padding, hover effect (darker blue) → stands out and feels interactive.
- **Why external CSS?** Keeps HTML clean, easy to change styles for whole site later, reusable.
